

RingCentral: Embedded Integration for Microsoft Teams

✉ hello@output.training
☎ (844) 3OUTPUT

Course Description

This course gives administrators a practical, step-by-step path to integrate the RingCentral embedded app with Microsoft Teams. Properly configure the desktop plugin and mobile mode, deploy the app to users at scale, and enable status or presence syncing between platforms. You'll also learn how the embedded app works for end users - calling, notifications, voicemail, SMS, fax, contacts, and core settings; so you can support user adoption.

Learning Tracks

Digital Transformation

Admin

UCaaS

Productivity

Collaboration

Why This Course Matters

- Stop switching between screens, manage calls, texts, and meetings in one familiar place - Microsoft Teams.
- Keep the robust features of an advanced phone system like RingCentral, but embed it within the company's internal communication platform Microsoft Teams.
- Centralize deployment and control the integration yourself, lowering support overhead and 3rd party installation costs.
